## KiwiSaver Balances

## SUMMARY

Te Ara Ahunga Ora (TAAO) commissioned Melville Jessup Weaver (MJW) actuaries to collect previously unknown data about KiwiSaver balances across age groups and gender. MJW's report contains data on $2,944,050$ members with total balances of $\$ 85.44$ billion as at 31 December 2021. This represents approximately $93 \%$ of the total KiwiSaver member base.

The MJW report highlights the popularity of KiwiSaver across all ages, including the over 65s, and the higher average balances for men than women at all ages.

When comparing current balances to what would have been possible for a median wage earner to have accrued over the 14 years of KiwiSaver, we see that they are lower, on average, across all age groups. Explanations for this include first home deposit withdrawals and saving suspensions.

While the current cohort of 'pre-retirees'(aged 55+) have only had 14 years of KiwiSaver (like everyone else) younger cohorts will have had access to KiwiSaver over their whole working life. In future, balances for those nearing retirement may be higher.

Table 1 - Average balance by age cohort and sex (Source: MJW, 2022:4)

| Average balance (\$) <br> Age | Total | Female | Male | Male/Female |
| :--- | ---: | ---: | ---: | ---: |
| 17 and under | 2,677 | 2,638 | 2,681 | $102 \%$ |
| $18-25$ | 7,971 | 7,586 | 8,804 | $116 \%$ |
| $26-30$ | 16,088 | 15,256 | 17,646 | $116 \%$ |
| $31-35$ | 20,269 | 19,141 | 22,738 | $119 \%$ |
| $36-40$ | 26,138 | 24,335 | 29,805 | $122 \%$ |
| $41-45$ | 33,331 | 30,072 | 38,715 | $129 \%$ |
| $46-50$ | 40,335 | 35,902 | 47,422 | $132 \%$ |
| $51-55$ | 45,212 | 40,023 | 53,420 | $133 \%$ |
| $56-60$ | 49,206 | 43,798 | 57,518 | $131 \%$ |
| $61-65$ | 53,579 | 48,457 | 61,606 | $127 \%$ |
| $66-70$ | 60,773 | 57,687 | 66,753 | $116 \%$ |
| $71-75$ | 64,529 | 61,363 | 70,358 | $115 \%$ |
| $76-80$ | 66,881 | 64,579 | 71,801 | $111 \%$ |
| $81-85$ | 213,928 | 212,261 | 216,979 | $102 \%$ |
| 86 and over | 228,903 | 259,586 | 190,636 | $73 \%$ |
| Unknown age | 14,395 | 13,163 | 19,516 | $148 \%$ |
| 711 ages | 29,022 | 27,061 | 32,553 | $120 \%$ |

## MAIN MESSAGE

KiwiSaver is a retirement savings scheme that is closely associated with the labour market. Contributions are most often made by employees, as a percentage of their salary/wages, and are matched by minimum contributions by employers. As a result, gender differences in the labour market are reflected in KiwiSaver balances, with women having lower average balances than men.

## KEY POINTS

- $40 \%$ of KiwiSaver members have a balance of less than \$10,000
- 19\% of those with less than \$10,000 are aged 17 and under
- $24 \%$ of those with less than \$10,000 are aged 18-25
- $22 \%$ of those with less than $\$ 10,000$ are aged 26-35
- However, $21 \%$ of those aged 51-65 also have less than $\$ 10,000$ and they may not have saved as much as they would have liked for their retirement.
- Men have a higher average balance than women across all groups (except over 86)
- Even in the under 17s and the 18 to 25-year-old age brackets (see Table 1)
- The gender pay gap only explains some of the difference in male and female KiwiSaver balances - not all of it (details by age in Table 2)
- The widest gaps are between men and women in their 40s and 50s
- On average, women in their 40s have approximately $\$ 10,000$ (or $30 \%$ ) less KiwiSaver than men
- On average, women in their 50s have approximately $\$ 13,000$ (or $32 \%$ ) less KiwiSaver than men
- This likely reflects the combined impact of the gender and ethnic pay gaps, time out of paid work, and the higher percentage of women than men that work part-time
- Overall, the balances are lower than would be expected for people who had
contributed regularly, without suspensions or withdrawals. This suggests that members have taken one or more suspensions or a withdrawal for their first home deposit or have not been KiwiSaver members for the full 14 years of the scheme (details in Table 3).
- Home ownership leads to greater wellbeing in retirement but savings suspensions reduce the funds available to live on during retirement.
- There are fewer members aged 65+ compared to younger cohorts (5.2\% of members) but they have higher average balances than those under 65.
- As this cohort was already 50 when KiwiSaver was introduced, they are less likely to have made first-home buyer deposit withdrawals, but may have transferred other savings into KiwiSaver or contributed greater proportions of their earnings
- Some people aged over 80 are using KiwiSaver (0.03\% of members) and they have significantly higher average balances than younger age groups
- This is cohort would not have had access to KiwiSaver before the age of 65 .
- There are more women than men with KiwiSaver, as there are in the total population, although the KiwiSaver gender ratio is slightly higher (see Table 4).
- Across all groups aged 18-65 KiwiSaver is popular, with $92 \%$ of the total population of $31-35$ years old in KiwiSaver.

## Table 2 - Gender Pay Gap and KiwiSaver balances

This table shows that the gender differences in KiwiSaver balances can be partly - but not fully explained by the gender pay gap. The gender pay gap is less than $4 \%$ for under 30s yet the difference in KiwiSaver balances for that age cohort is much greater. Those with lower balances early in their working lives will be further disadvantaged over time due to the impact of compounding, which will be more beneficial to those with higher initial balances.

| Age | Difference in average <br> KS balance | Gender pay gap* | Residual difference |
| :---: | :---: | :---: | :---: |
| 17 under | $1.6 \%$ | $0.0 \%$ | $1.6 \%$ |
| $18-25$ | $16.1 \%$ | $3.6 \%$ | $12.5 \%$ |
| $26-30$ | $15.7 \%$ | $1.8 \%$ | $13.9 \%$ |
| $31-35$ | $18.8 \%$ | $10.8 \%$ | $8.0 \%$ |
| $36-40$ | $22.5 \%$ | $11.7 \%$ | $10.8 \%$ |
| $41-45$ | $28.7 \%$ | $16.7 \%$ | $12.0 \%$ |
| $46-50$ | $32.1 \%$ | $13.3 \%$ | $18.8 \%$ |
| $51-55$ | $33.5 \%$ | $12.1 \%$ | $21.4 \%$ |
| $56-60$ | $31.3 \%$ | $13.0 \%$ | $18.3 \%$ |
| $61-65$ | $27.1 \%$ | $15.0 \%$ | $12.1 \%$ |
| $66-80$ | $13.8 \%$ | $8.3 \%$ | $5.5 \%$ |
| All ages | $20.3 \%$ | $9.1 \%$ | $11.2 \%$ |

*Table created by TAAO from data sourced from Stats NZ based on median hourly earnings 2021.
Note: age bands do not match exactly as Stats NZ uses slightly different age bands.

## Table 3 - KiwiSaver balances and scenario comparisons

This table shows hypothetical scenarios for people who had invested in KiwiSaver for 14 years (the maximum time possible) without making any withdrawals. The median wage for each cohort was used to determine the contribution amount (minimum employee and employer) and government incentives were included.

Balances are lower, on average, across all age groups but more pronounced for younger people (age 44 and under). This cohort may be more likely to have made first home deposit withdrawals than those aged 45 and over. Gender differences are evident within potential fund balances because median wages for each gender were used in the calculation.
